Enterprise Mobility Management

MobiControl for Apple[®] iOS

MobiControl for Apple iOS

SOTI MobiControl is a unified enterprise mobility solution that provides the ability to securely manage mobile devices, applications, content, and email. SOTI enhances and broadens the enterprise mobility capabilities of iOS by improving the “out-of-the-box” enterprise experience on iOS devices.

SOTI MobiControl builds on its experience in iOS management with powerful security and management features designed to secure the device without disrupting the iOS user experience. With MobiControl’s advanced features, enterprises have granular control of how iOS devices are used, and how data is accessed to ensure sensitive corporate information is kept in authorized hands only.

SOTI MobiControl offers a quick and easy way to manage iPhone, iPad, or iPod Touch devices allowing enterprises the ability to remotely secure, track, configure and support their corporate or personally (employee)-owned devices. With integrated application and content management and support for Apple iOS Enterprise Deployment Programs, MobiControl is the Enterprise Mobility Management (EMM) solution of choice to take charge of your iOS deployment.

Features

- **Asset Management**
Enroll, configure, provision & manage devices over the air.
- **Device Configuration**
Configure MS Exchange, network settings, and restrict device features and applications.
- **Advanced Security**
Block iCloud sync, enforce strong passwords and data encryptions, remote lock and wipe.
- **Wireless Application Distribution**
Deploy enterprise & app store apps securely via a private app catalog or deployment policy (VPP).
- **Alerts and Reports**
Alert & report on a variety of live device information such as jailbroken status.
- **Application Management**
Deploy applications seamlessly over the air to any managed device.

SDK for iOS

Enhance your Enterprise Apps with Remote Support

SOTI MobiControl’s SDK for iOS enhances enterprise applications on iPhones and iPads with advanced management capabilities. This allows ISVs and enterprise application developers to remotely support their deployment and enhance their applications with critical mobile device management security features provided by MobiControl.

Features

- **Remote View**
View & support enterprise application activity in real time.
- **File Explorer**
Edit, copy & paste into device application file system.
- **Two-Way Chat & Messaging**
Send push notifications & chat with end users remotely.
- **Jailbreak detection**
Detection and alerts if the device has been jailbroken.
- **Location Services**
Locate and report device coordinates globally in real time.

Apple Device Enrollment Program (DEP)

SOTI support for Apple's Device Enrollment Program (DEP) provides IT administrators with the ability to streamline deployment of iOS devices for institutions purchasing and deploying iOS at scale. Customers deploying institutionally or corporately owned iOS devices can now simplify pre-configuration, saving time and significant cost. Devices that are under Apple's Device Enrollment Program are not required to be passed by the IT administrator's desk, as device enrollment and configuration occurs as a part of the device activation.

Manage All Devices from a Single Pane of Glass

With the deployment of consumer smartphones and tablets into corporate-liable, BYOD, and even CYOD programs, enforcing security policies and best practices while supporting diverse user requirements can be a tough balancing act. Enterprise mobility is changing the traditional workplace to an on-demand, virtual environment accessible at anytime, anywhere and from any device.

Secure Access to Corporate Content

SOTI MobiControl's Secure Content Library is the ideal platform for securely distributing and managing corporate content to your mobile workforce. Supporting all major formats, files can be seamlessly delivered one-to-one, one-to-many or one-to-all. Secure Content Library gives you fine-grained control over your content, allowing administrators to set priority levels, document expiry, and location-based delivery.

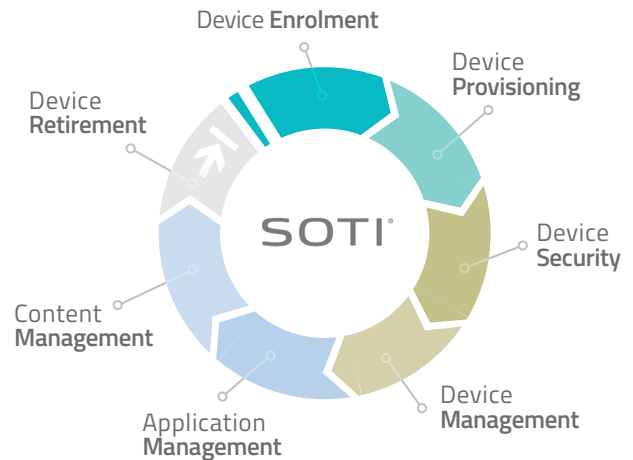

Enable Access & Privacy of Corporate Email

Mobile email management is more than just providing mobile access to your corporate Exchange server. Enterprises must ensure sensitive corporate data stays behind the firewall. With SOTI MobiControl, administrators can create email sharing and forwarding policies to protect against data leakage and inadvertent disclosure of sensitive company information. Comprehensive Exchange Access Controls prevent unmanaged devices from accessing the corporate Exchange server.

Empower Employees with Corporate Applications

Applications are at the center of every enterprise's mobility strategy. Secure access to line of business applications gives employees the tools they need to be more productive and allows enterprises to realize the full potential of a mobile workforce. SOTI MobiControl helps you get the right applications to your mobile workforce in a fast, secure and scalable manner. Application Catalog gives users a one-stop shopping experience for corporate approved apps. Enterprises looking for more granular control over corporate-liable devices have the added flexibility to silently install mandatory applications. Robust whitelist and blacklist policies provide an extra layer of security across your deployment.

Full Lifecycle of Mobility Management

SOTI is a proven product innovator and EMM Industry leader. Over 15,000 customers across 170 countries rely on SOTI for their EMM needs. We empower the enterprise to take mobility to endless possibilities.
